Abstract of JP2002125960

PROBLEM TO BE SOLVED: To provide a photography system by which a photographing image and its photographing information are easily, efficiently and also surely made to be coincident.

SOLUTION: An input/output means 104 obtains photographing information from a prescribed information management side (RIS) via a portable storage medium 102 in a portable photographing unit 107 using a prescribed photographing means (X-ray flat panel sensor). A storage means 105 stores the photographing image to which photographing information is added immediately after photographing.
